looks just like glass

krome collection | 4 series

As the name suggests, demetra's krome collection is distinguished by a highly glossy surface. It will give you a stylish, clean and modern appearance, offering a wide range of colors to ensure that your high gloss kitchen can be tailored to your exact taste and specification.

Aside from its high gloss appearances, here are a few other benefits that this collection has to offer, these include:

- »»» easy cleaning - gloss kitchens can be wiped clean with only a damp cloth
- »»» durability - all of the gloss kitchens by demetra are finished to a high quality that ensures their endurance and longevity throughout everyday use
- »»» versatility - gloss kitchens can be easily and successfully blended with other colors and materials, including wood, stone and stainless steel
- »»» different finish options - different gloss kitchen finish materials are available to suit different budgets
- »»» a light reflective quality - as light hits the surface of a gloss kitchen door it will be reflected back across the room

krome collection includes 4 series:

- »»» diamond
- »»» mirror
- »»» ion
- »»» haute

* Printed representations may vary from actual product. Please see actual sample for more accurate color and comparison.

diamond series

material origin: **U.S.A.** price index: \$\$ - \$\$\$

Demetra is proud to present our **DIAMOND** series, the very best **SCRATCH-RESISTANT** high-gloss acrylic surface!

scratch resistant

- extreme high-gloss finish – an impressive 90% gloss level is reflected off the perfectly smooth surface creating a mirror-effect.
- scratch-resistant – top hardcoat layer developed to be the most scratch-resistant acrylic.
- carb certified phase II MDF core.

ion series

material origin: **U.S.A.** price index: \$\$\$

Ion has the stylish appearance of **brushed metal** with a luxurious gloss finish.

brushed metal look

- a stunning visual aesthetic is created through the vibrant color, **metallic** shading and glossy surface.
- an 80% gloss level is reflected using a glossmeter testing instrument.

haute series

material origin: **Spain** price index: \$\$\$\$

High gloss finish panel with excellent physical and mechanical performance. Haute is a technologically advanced product that undergoes different industrial processes which result in a decorative panel with a high gloss finish on its exterior face, while the interior side models a decorative paper of the same design.

wood pattern

floating shelf

- »»» accommodate perfect for today's transitional or contemporary kitchen and bathroom styling
- »»» use functionally to store plates, glasses or decorative items in the kitchen
- »»» unique hanging system safely supports 10 pounds per running foot of shelf length, metal bracket included
- »»» miter fold construction on an engineered custom core
- »»» width available in 3" increments from 24" to 72"
 - » standard grain orientation: horizontal top/bottom/all edges
 - » vertical top/bottom/front edge CANNOT be produced

*please check out our website or visit our showroom for more color options.

impressions collection | 2 series

The Impressions collection features thermofoil doors which are made using a flexible vinyl material that is applied by heating the vinyl and molding it over medium-density fiberboard (MDF). It has a flawless, silky-smooth surface that resists chipping better than painted surfaces.

If you are searching for reasonably-priced kitchen cabinets with little maintenance required, do not hesitate to select thermofoil kitchen cabinets.

Advantages of thermofoil cabinets:

- »»» easy care and low maintenance
 - » the laminate surface resists stains and is easily wiped down. Stubborn residues such as grease can be removed with a mild all-purpose cleaner. Thermofoil doesn't require protective coatings, as wooden cabinets do, which means they need less maintenance.
- »»» uniform look from door to door,
 - » this kind of cabinet door is the best substitute for solid wood.
- »»» design and color versatility
 - » a major advantage of thermofoil cabinets is their wide range of color and pattern options. The vinyl surface of these cabinets may be molded into a variety of patterns and shapes, which allows you the choice of a basic flat cabinet, or one with an embellished design; you also have the option of matte or glossy finishes.

The Impressions collection includes two series:

- »»» il
- »»» id

The ID & IL series are dent resistant and easy to clean with a simple soap and water solution. Made of approximately 90% wood fibers and 10% resin to hold it together, MDF maximizes the use of our forest resources by utilizing the residual wood element of forests not used in producing lumber, which could have otherwise ended up in landfills.

aries series

material origin: U.S.A. price index: \$\$ - \$\$\$

Smooth lines make the Aries a sleek and beautiful choice for a contemporary kitchen. The thin wood edgeband lining the sides of the doors is nearly undetectable. Additionally, this veneer door is available with FSC certified materials or in a diverse variety of color and grain options of environmentally friendly reconstituted wood veneers.

neo collection | 2 series

The Neo collection features a wood veneer slab door design, it offers a sleek look while maintaining the natural beauty of wood. Veneer refers to thin slices of wood, is applied to an engineered substrate core such as an MDF (medium-density fiberboard) panel, providing strength, durability and stability.

The Neo collection has two series:

➤➤➤ aries

➤➤➤ shinnoki

* Printed representations may vary from actual product. Please see actual sample for more accurate color and comparison.

chocolate oak

Double-sided

Shinnoki panels are finished the same on both sides with the Shinnoki design and protection technology.

A genuine wood top layer

The top layer of Shinnoki is a sheet of real wood veneer, assembled according to our unique mixmatch technique. The surface is gently brushed, stained and lacquered with a soft-touch acrylate urethane lacquer. The result is a pleasant touching surface where the protection, the natural feel and exclusive appearance of the wood are well-balanced.

What is mixmatch?

Mixmatch is a technique in which we joint wood veneer sheets together that come from different trees and have been cut in different ways. The effect is the natural appearance of solid wood. When a continuous surface is created using different boards, there are no visual breaks in the pattern. Just as with solid wood, every board is different, but they still belong together. The result is a finished sheet with a lively look and uniform quality.

RöR collection | 5 series

RöR collection features with structured textured melamine doors, which are made by heat and pressure fusing a textured resin melamine paper onto engineered board to create the textured quality or three-dimensional effect. The surfaces are easily cleaned, tough and decoratively pleasing, available in a wide range of colors and wood grain patterns. It provides a durable & affordable alternative to high-pressure laminates.

RöR collection includes 5 series:

- luca
- madrid
- alps
- victoria
- liberty

UltraMatte collection

Our innovative UltraMatte acrylic collection is incredibly smooth and soft to the touch. The enhanced surface properties make it look as good as it feels.

* Printed representations may vary from actual product. Please see actual sample for more accurate color and comparison.

UltraMatte panels consist of a premium quality MDF substrate with a co-extruded polymer acrylic top layer. The core material is carefully selected for its low surface variance, so the surface is not flawed by substrate imperfections.

The panels are PUR (polyurethane) laminated inside a Class-100 (ISO 5) cleanroom, which is a manufacturing process that guarantees that UltraMatte is as close to a perfect product as technologically possible.

Our WATER-BASED finish

What is our water-based finish made of?

Our water-based top coat is a water-borne coalescing finish. It is primarily acrylic with some polymer content. When applied on our flat-line finishing system, it is cured using a UV lamp. Products that cannot be finished on the flat-line finishing system are cured using heat. We use both pigmented and dyeing stains to achieve your preferred finish on your selected wood species.

Why use water-based finished?

Our water-based finishes provides a beautiful appearance, stunning depth of look, and a smooth, tactile feel that exceeds expectations!

Environmental compliance is another key reason to opt for a water-based finish. Many solvents evaporate into what are known as volatile organic compounds, or VOCs. Water-based coatings have no or considerably less solvents, they are a great way to lower the VOC output.
